

GCT Iberia

GCT Iberia is currently coordinating a proposal to the Second Call of Galileo Joint Undertaking, Area 1, 2412 proposal. Special User Communities, focused on Location Services with Galileo for Elderly People. In this context, we have established a consortia. We have already covered almost all the roles and are willing to receive proposal of cooperation from EGNOS/Galileo receiver manufacturers that might be looking for trialing their components at personal devices. Should you be interested in this proposal, please contact us at: research@gctiberica.com and we will study carefully your proposal of cooperation.

GCT is a mobile location service provider, developing and operating location services for vehicle, persons, objects and animals. GCT location services are internet services provisioning infrastructure and proprietary technology of handheld and on onboard terminals for the mass market. Our terminals integrated today GPS receivers and wireless communication with the three GPRS operators in Spain.

GCT center his business in Europe although has just established agreements to open new location services in South America, Middle East and China.

GCT has internal on-going R&D activities in different technologies such as A-GPS, Cell-ID, EOTD, EGNOS and looks to test Galileo pre-technology into his terminals.

In order to know something more about our company you can see the flash intro at our portal under development www.tekel.net. Apart from our skills on location service provisioning, we will be contributing too to the proposal preparation with our experience in evaluation processes at the European Commission.
